EXECUTIVE SUMMARY

This 3rd TAP implementation report summarized the results received via the JSG Reporting Tool in June 2018 and thus shows the status of implementation by 30 June 2018.

The number of invitations and responses have grown relative to the 2nd reporting session. With the present survey the negative trend of responses is changed into a growing number of feedback, the response rate climbing to 37 %.

Regarding the TAP TSI functions reported, the following Levels of Fulfilment can be observed:

- Most IMs reported to have completed the Primary Location Codes on their network.
- Most of the companies (IMs nearly 80 %, RUs-P nearly 70 %) are identified by Company Code.
- The level of fulfilment for Common Interface shows a remarkable difference between IMs and RUs-P. Half of IMs have already implemented, while most of RUs-P are still developing.
- One third of participating IMs have Train Running Information in production, whereas this is only the case for one RU-P out of ten.

Only a part of the companies invited to participate to the survey deliver feedback. Consequently, the degree of implementation relative to invitations is always considerably lower than the degree of implementation relative to responses. It is likely, that the degree of implementation as set out in this report does not reflect real situation.

1. BACKGROUND TO THE ASSIGNMENT

Commission Regulation (EU) No 454/2011, relating to the Telematics Applications for Passengers subsystem (TAP TSI), entered into force in May 2011. The purpose of the TAP TSI is to define European-wide procedures and interfaces between all types of railway industry actors such as passengers, railway undertakings, infrastructure managers, station managers, public transport authorities, ticket vendors and tour operators. The TAP TSI is designed to contribute to an interoperable and cost-efficient information exchange system for Europe that enables the provision of high quality journey information and ticket issuing to passengers in a cost-effective manner, thus also fulfilling requirements of the Passenger Rights Regulation (Regulation (EC) No 1371/2007).

Under this Regulation the European Union Agency for Railways (ERA) shall assess and oversee its implementation.

The Agency has established the 'TAF TSI Implementation Cooperation Group' in order to evaluate the reports of the sector. The remit of this group is monitoring the parameters for RU/IM communication of both TAF and TAP TSIs. Members of the European railway sector are encouraged to submit their reports through the JSG to the Agency.

2. METHODOLOGY

General assumptions

Starting with the 6th Reporting session, the monitoring of RU/IM functions is being carried out using one common questionnaire for both TAF and TAP TSIs. However, results from the survey are presented in two separate reports.

The progress of implementation of the TAF and TAP TSI is reported twice a year based on the following assumptions:

- Companies are reporting per mandatory TAF or TAP TSI function compared to their own Master Plan target date. In case there is no company Master Plan it will be reported against the target implementation date.
- The level of fulfilment will be displayed in predetermined percentage steps at 0%, 25%, 50%, 75% and 100%.
- Each message based function is realized at 100%, if there is at least one implementation of message exchange in production, even if with a single partner only.

The level of fulfilment in terms of percentage steps are defined as follows:

- 0% - Level 1: Not started - Project not launched
- 25% - Level 2: Initiating phase - Implementation plan is available in the company
- 50% - Level 3: Planning phase - Project development
- 75% - Level 4: Executing phase - Pilot project / System testing
- 100% - Level 5: In-Production & Monitor and Control: Finished means Telematics data exchange is implemented

The obligation to meet functions of the TAF and TAP TSI is sometimes limited to specific stakeholders of the railway sector. Evaluation of the results of this survey is therefore stakeholder-specific. For that reason and in accordance with European legislation the following stakeholders are taken into account:

- Infrastructure Manager (IM)
- Railway Undertaking for Freight transport (RU-F)
- Railway Undertaking for Passenger transport (RU-P)
- Wagon Keeper (WK)
- Allocation Body (AB)

Establishment of this report

This report summarised the results received via the JSG Reporting Tool during the eighth overall reporting period lasting from 4 June 2018 to 29 June 2018 and thus shows the status of implementation by 30 June 2018. Diagrams in the following chapters of this report show results per RU/IM function summarised in an anonymous way.

Table 1 gives an overview about the history of reporting periods.

Report session	Reporting period	Number of questions ¹
1 st Report TAF	01.07.2014 - 31.12.2014	21
2 nd Report TAF	01.01.2015 - 30.06.2015	40
3 rd Report TAF	01.07.2015 - 31.12.2015	42
4 th Report TAF	01.01.2016 - 30.06.2016	53
5 th Report TAF	01.07.2016 - 31.12.2016	57
6 th Report TAF/1 st Report TAP	01.01.2017 - 30.06.2017	91
7 th Report TAF/2 nd Report TAP	01.07.2017 - 31.12.2017	65
8 th Report TAF/3 rd Report TAP	01.01.2018 - 30.06.2018	66

Table 1: Reporting periods

The ‘TAF/TAP TSI Implementation Report Volume 8’ questionnaire contains ten question groups, eight of which are about the current implementation of TAF and TAP TSI functions:

TAF/TAP TSI functions for RU/IM communication to be implemented/reported per type of company		Type of company				
		IM	RU-F	RU-P	WK	AB
TAF/TAP TSI function	Primary Location Codes (PLC)	X				
	Company Code (CC)	X	X	X	X	X
	Common Interface (CI)	X	X	X	X	X
	Train Running Information (TRI)	X	X	X		
	Train Composition Message (TCM)	X	X			
	Consignment Note Data (CND)		X			
	Wagon Movement (WM)		X			
	Wagon InterModal unit Operational database (WIMO)		X			
	Rolling Stock Reference Database (RSRD)				X	

Table 2: TAF/TAP TSI functions as reported per type of company

Two more general question groups intend to find out the actual situation and intentions of companies:

- Company information
- Sector Tools in use

This report was drafted by the Implementation Reporting Group (IRG), the members of which are listed in Annex 1. As a result, it was endorsed at the JSG meeting on 18 September 2018 and published accordingly. It will be presented at the ERA TAP TSI Implementation Cooperation Group meeting on 16 October 2018.

¹ Please note, the questions in the TAF and TAP RU/IM questionnaire are context specific. The number of question to be responded, depend on the type of company and is not the total number listed in the table 1.

3. PARTICIPATION IN THE 3RD REPORTING SESSION

Responses to the survey

The number of project managers invited to report about the implementation of the TAF TSI and TAP TSI is shown in diagram 1 together with the number of responses received thereof. Starting from the first report, invitations and responses have grown continuously. With the present survey the negative trend of responses could be changed again into a growing number of feedback.

Diagram 1: Evolution of participation over time

Also, the response rate, calculated as number of responses in relation to number of invitations, grew again from 34,1 % to 37,6 % (see diagram 2).

Diagram 2: Evolution of response rate over time

Diagram 3 displays the distribution of total responses per country. The feedback comprises 23 EU Member States plus Switzerland and Turkey. The average number of answers per country is close to 9.

Diagram 3: Number of responses per country

Diagram 4 shows the distribution and the development of responses per country.

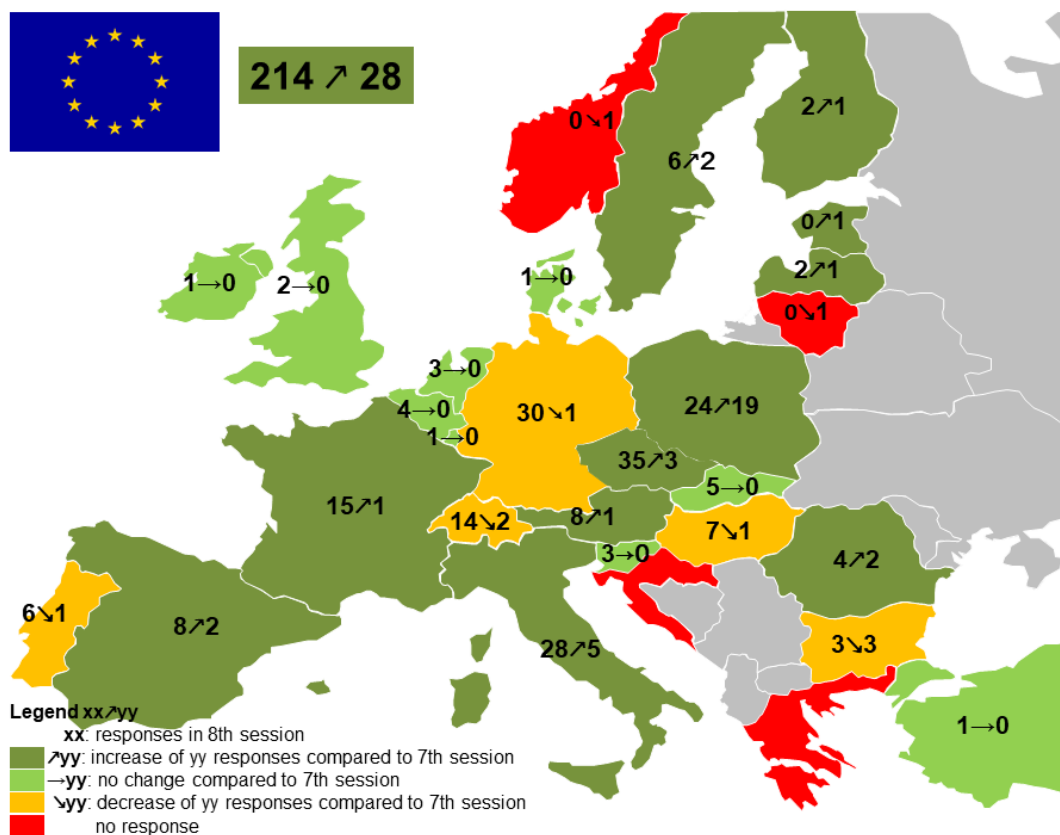

Diagram 4: Evolution of responses per country

Participation per company type

Companies in this survey may have multiple roles, such as RU and WK at the same time. Therefore, the total number of responses displayed in diagram 1 (214 companies) and listed in Annex 2 is lower than the total number of company types shown in diagram 5 hereafter (263 companies).

Compared to the previous survey, participation for all types of company has grown.

Annex 2 'Responses contact list v8' to this report gives a detailed overview about the companies per country having replied to the seventh session of TAF and TAP TSI implementation monitoring. Please note, that there are entities which have reported on behalf of several companies.

Diagram 5: Evolution of participating per company type over time

4. DATA BASIS FOR EVALUATION

To establish a wider sector representation, 35 companies from the previous survey, which have not replied this time, are also taken into consideration. For companies having reported to both surveys, only the company information from the 8th session is included.

Diagram 6 displays the total number of types of company (297) with their allocation to the following reporting sessions:

- Companies only reporting to the 7th reporting session
- Companies reporting to both 7th and 8th reporting session
- New companies reporting for the first time in the 8th reporting session

The reporting period thus represents the second half of year 2017 and the first half of year 2018.

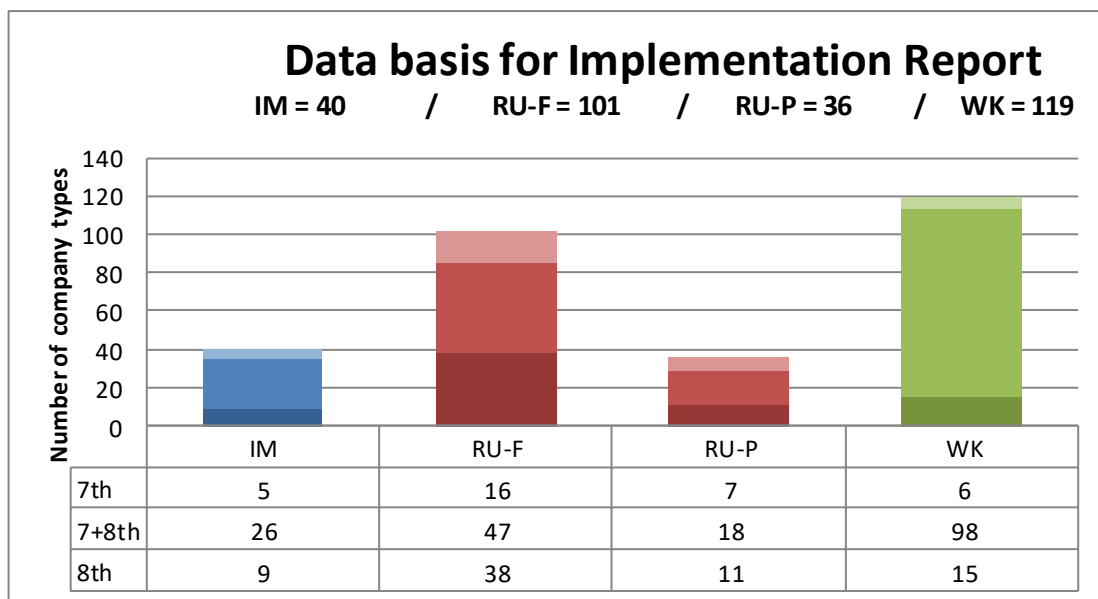

Diagram 6: Number of types of company per reporting session

Annex 3 'Responses contact list v7' to this report lists the companies per country having replied to the seventh session of TAF and TAP TSI implementation monitoring and not to the present one.

5. IMPLEMENTATION MONITORING OF TAP TSI FUNCTIONS

Common Reference Files - Primary Location Codes (IMs)

The Target Implementation Milestone for realisation of the Primary Location Code Function (PLC) according to the TAP TSI Masterplan was 2015. This activity corresponds to Primary Location Codes, which have to be defined by IMs. Consequently, the following diagram only refers to IMs. Responses refer to initial upload of primary location codes, but update and maintenance process and use of codes is a different issue and not yet taken into account.

Diagram 7 indicates, that most IMs reported to have completed the Common Reference Files for locations on their network. However, complete population of PLC is not yet reached. Regarding the level of fulfilment of PLC implementation, diagram 7 shows 24 IMs with complete implementation. 5 out of 40 IMs in the evaluation are considered with data from the previous survey.

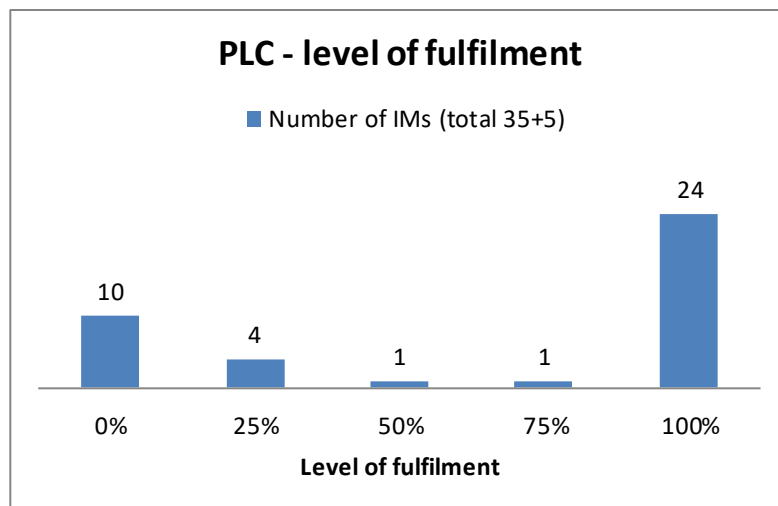

Diagram 7: Common Reference Files - Primary Location Codes (PLC)

Diagram 8 shows the evolution of complete implementation of PLC in relation to the number of IM responses.

Diagram 8: Evolution of PLC implementation

Common Reference Files - Company Code (all companies)

The Target Implementation Milestone for realisation of the Company Code Function (CC) according to the TAP TSI Masterplan was 2015.

The bar chart below (diagram 9) is indicating the existence and use of company codes as part of the Common Reference Files for IMs and RUs-P. For CCs only two predefined percentage steps exist, because either a company does have an own CC or not. Most of companies having replied to the query possess a CC.

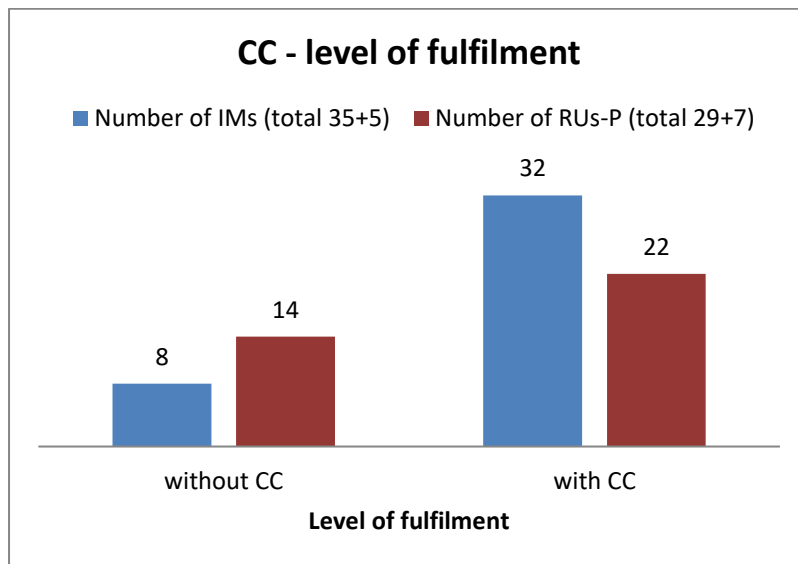

Diagram 9: Common Reference Files - Company Codes (CC)

According to Diagram 10, the number of companies with CCs grew for IMs and went down for RUs-P. The trend observed is similar to participation.

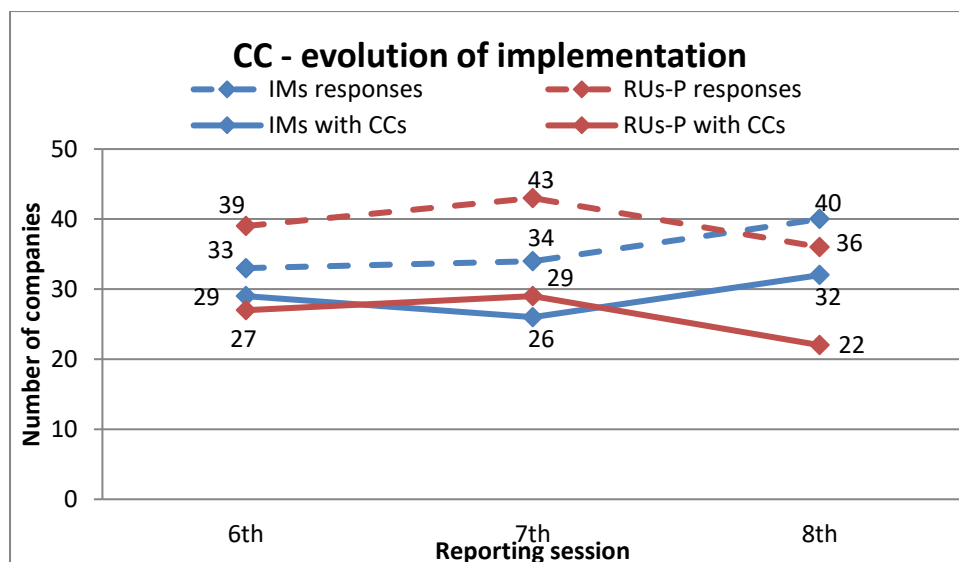

Diagram 10: Evolution of implementation for CC

Common Interface Implementation (all companies)

The Target Implementation Milestone for realisation of the Common Interface Function (CI) according to the TAP TSI Masterplan was 2015.

Diagram 11 summarises the feedback related to the availability of CI and shows a difference in level of fulfilment between IMs and RUs-P. The CI is completely implemented by 18 IMs and 4 RUs-P.

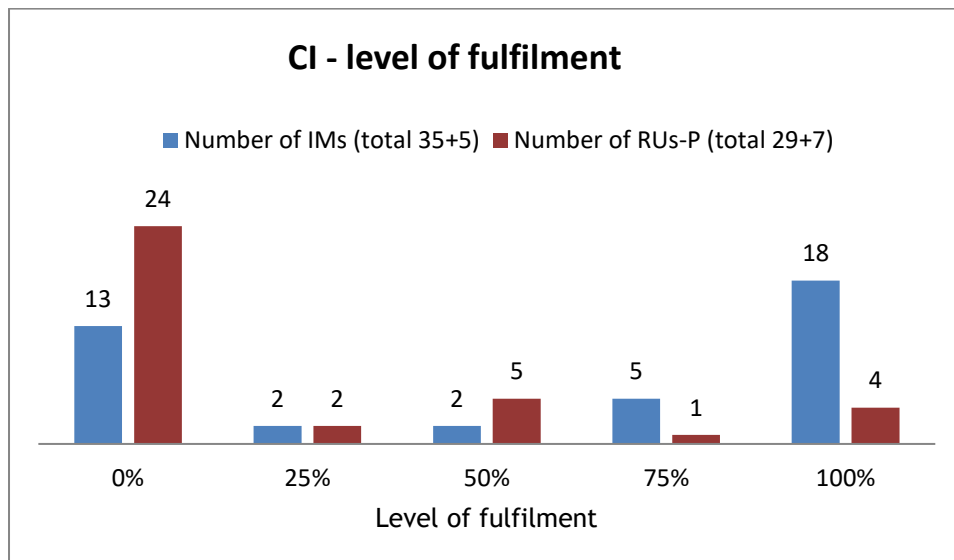

Diagram 11: Common Reference Files - Common Interface (CI)

The developments of complete implementation of the CI over time according to diagram 12 shows again the relation to the number of responses per company type. There is no evolution of CI in production up to June 2018. 50% of IMs have already finished the implementation of the CI, while the majority of RUs-P is still developing.

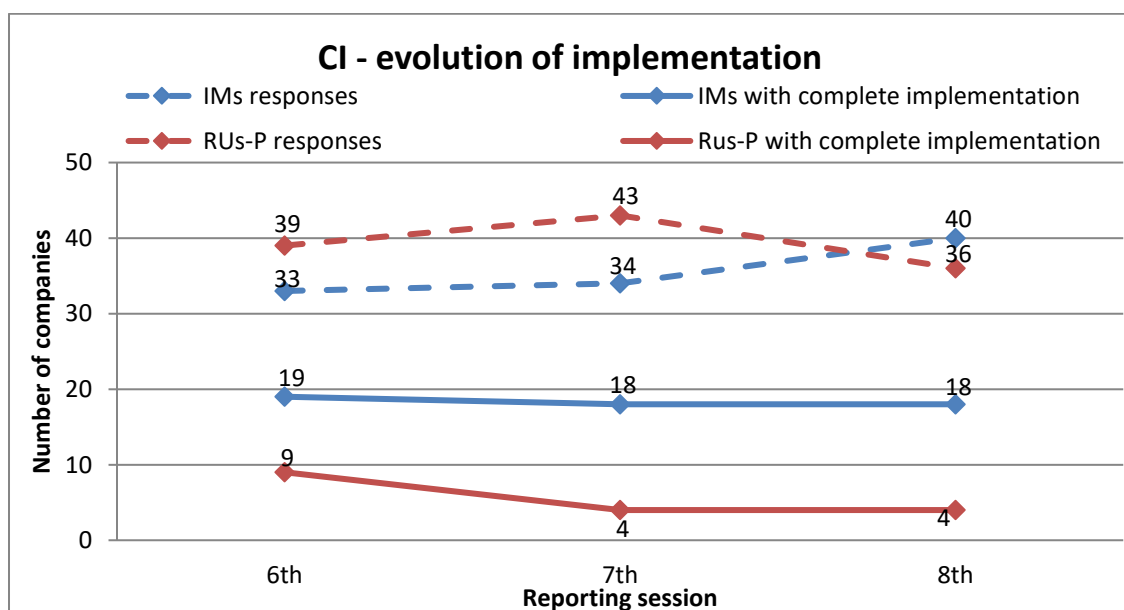

Diagram 12: Evolution of implementation for CI

Train Running Information (IMs and RUs-P)

The Target Implementation Milestone for realisation of the Train Running Information message (TRI) according to the TAP TSI Masterplan was end of 2017 for IMs and is end of 2018 for RUs-P. This monitoring concerns only one aspect of the TAP TSI basic parameter 'Train running forecast', the Train Running Information message. The Train Information System (TIS) is a common sector tool managed by RNE. Messages sent by IMs to TIS or messages received by RUs from TIS through traditional interfaces are considered as 75 % complete fulfilment and TAF messages sent or received by Common Interface are counted as 100 % fulfilment.

Diagram 13 indicates 15 IMs and 8 RUs-P with 100 % level of fulfilment.

Diagram 13: Train Running Information (TRI)

Regarding diagram 14, both the number of IMs and RUs-P having implemented the TRI increased in comparison to the 7th reporting session.

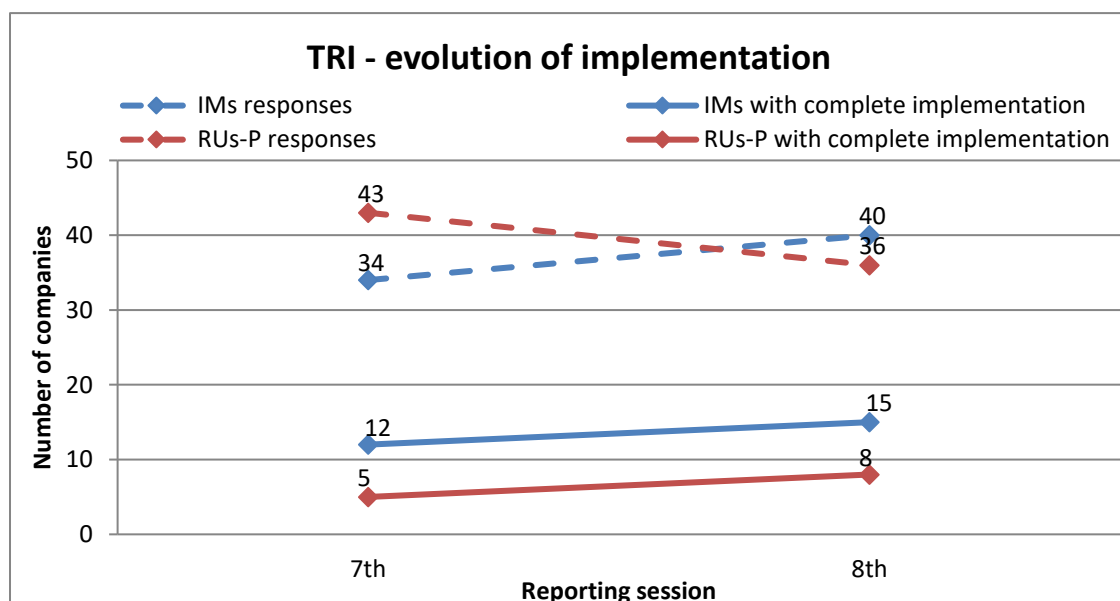

Diagram 14: Evolution of implementation for Train Running Information

Diagram 15 gives an impression about the state of implementation of TRI by IMs in countries across Europe. The IMs having the longest network have been taken as relevant for the country. For IMs still in development the current planned end date and the respective level of fulfilment is shown in diagram 15.

In CH, CZ and HU there are always two IMs having completed TRI implementation. Among the IMs there are 11 small companies, such as harbours, having responded to this survey. Contrary to the level of fulfilment of dominating IMs, such small companies have not even started projects.

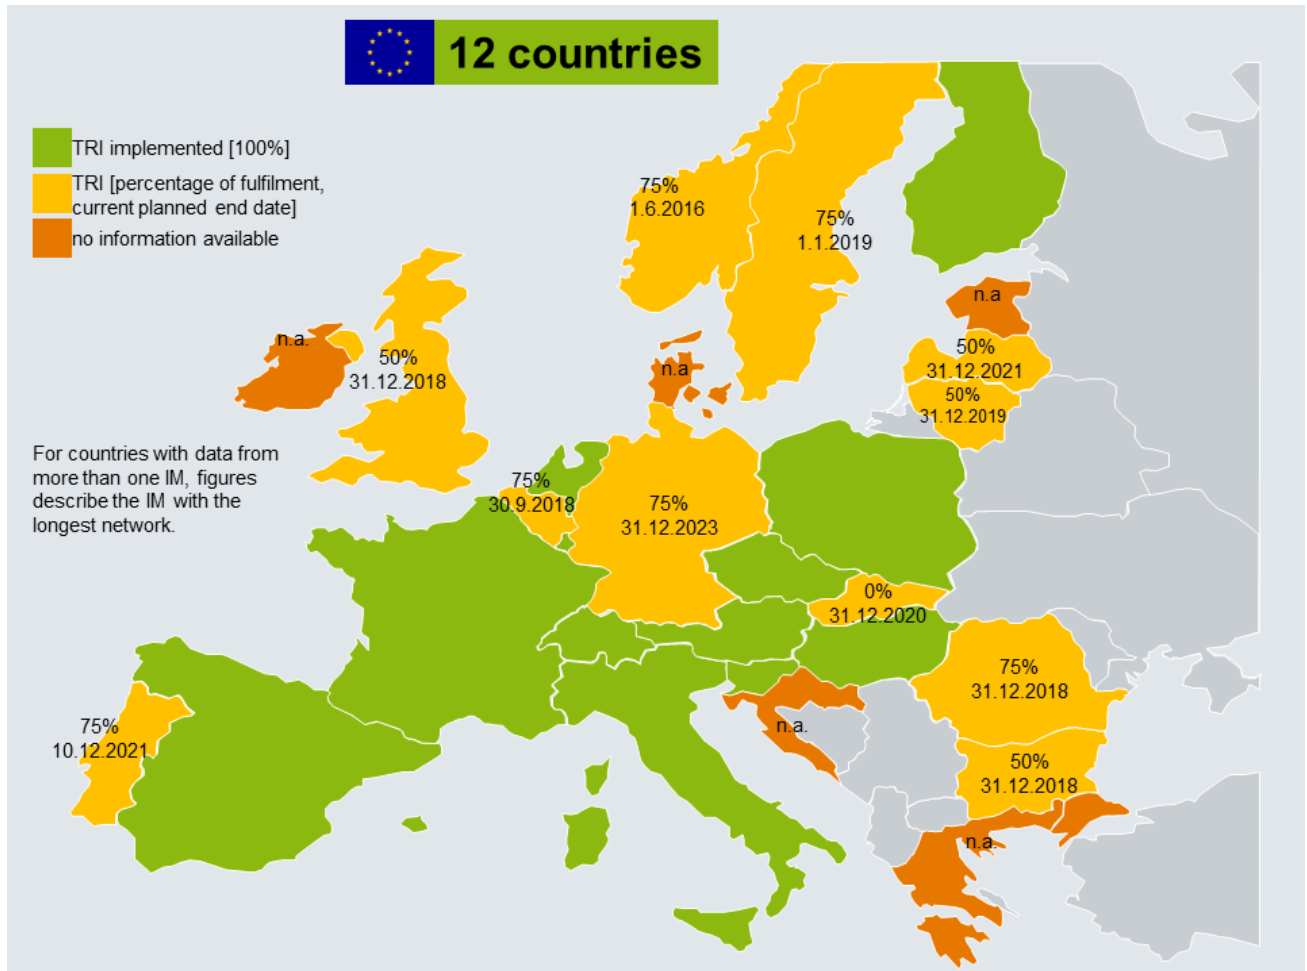

Diagram 15: Implementation of TRI of IMs across European countries

Reasons for not starting implementation of TAF/TAP TSI functions

Companies could declare in a dedicated answer for each TAF/TAP TSI function one reason why they did not yet start implementing it. Diagram 16 gives a summary of the reasons selected by the companies.

Feedback regarding reasons for not implementing increased with plus 97 in total more than participation to the survey. All categories except 'process reasons' were affected by that evolution.

Diagram 16: Reasons for not starting implementation of TAF/TAP TSI functions

Degree of implementation at European level

This chapter summarises the development of the Degree of Implementation (DI) at European level for the TAP TSI functions since the beginning of reporting.

The DI in this report is defined as the relation of companies having fully implemented (100 %) the particular function compared to the companies having replied to this query in per cent.

Diagram 17 shows the DI for functions to be implemented by IMs. Implementation of these functions show a different trend relative to the last report. DI for the functions CC and TRI increase by 3 to 4 % each, whereas DI for PLC and CI decline.

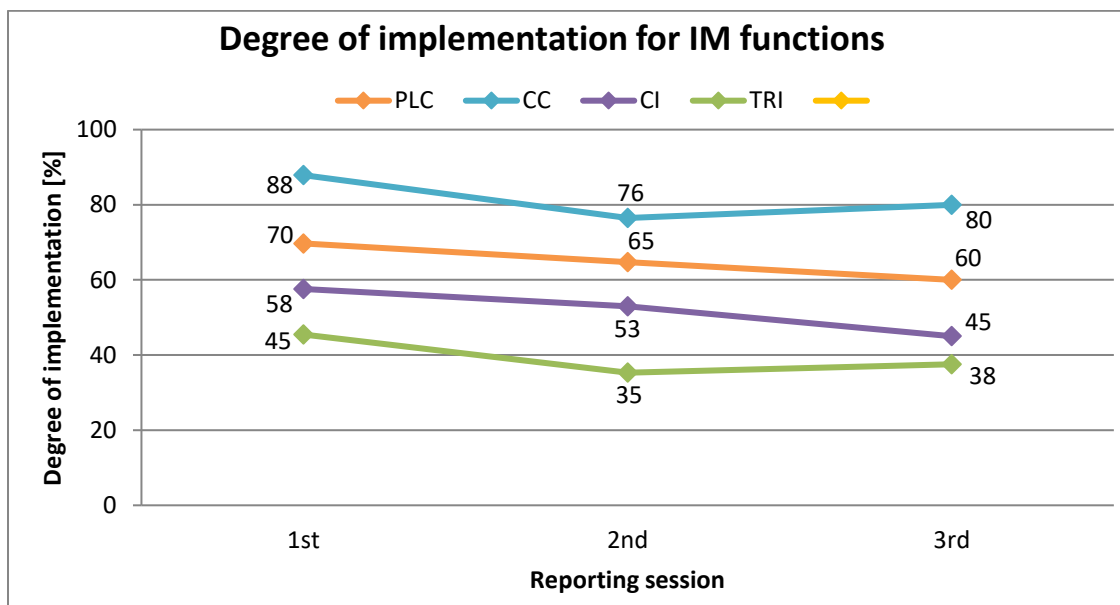

Diagram 17: Reported DI for IM functions

Diagram 18 indicates the evolution of implementation for RUs-P functions. Generally, the proportion of RUs having finished implementation is considerably lower than for IMs. The DI for the CC function stays high at 61 %. For the CI and TRI functions a positive trend is visible.

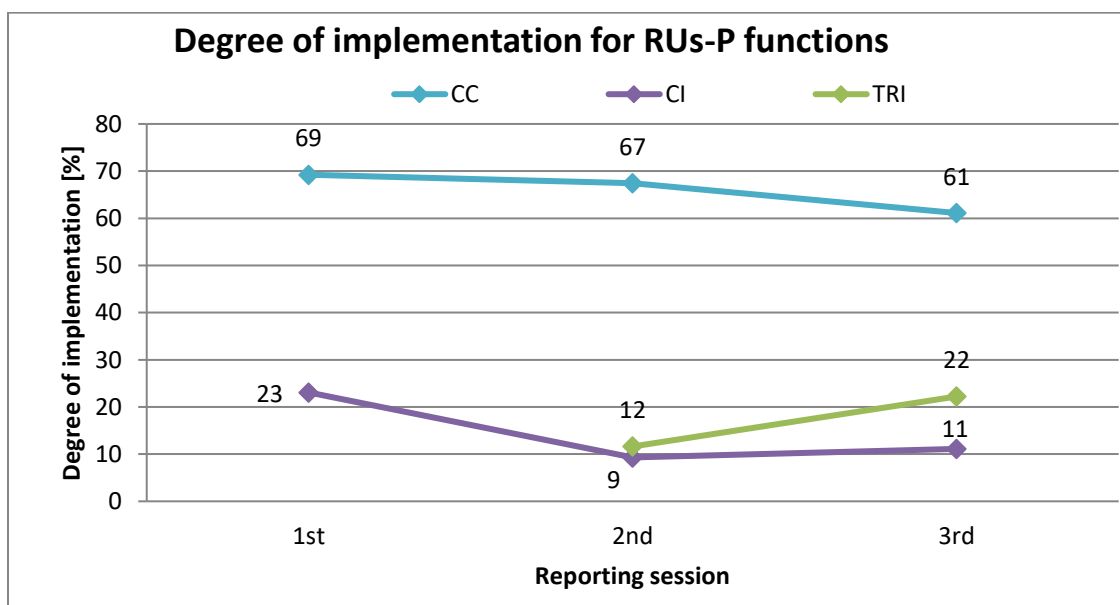

Diagram 18: Reported DI for RUs-P functions

7. CONCLUSION AND FINDINGS

The number of companies having responded to the 3rd questionnaire is, as always, significantly lower than the number of companies having been invited. After a decline in the previous reporting session, the response rate rose again from about 34 % to 37 %.

Growth in participation is observed for both types of companies. An outstanding effort improving feedback has been made in Poland.

The inclusion of data from the previous reporting session in this report was an effort to have a more complete view of the company's feedback and the current level of implementation.

The degree of implementation (DI) for the different TAP functions (diagrams 17 and 18) in the present report show a mixed development. Degree of implementation of CC has the highest value for all types of companies. For all other functions the degree of implementation for IMs is higher than the one for RUs.

The degree of implementation (DI) as set out in diagrams 17 and 18 of this report is calculated from the responses to the questionnaire. If companies not having responded would be also taken into calculation, the degree of implementation would drop off.

Disclaimer

The RU/IM Telematics Joint Sector Group (JSG)

The JSG was set up in October 2012 as a voluntary organisation supported by nine European Associations involved in the implementation of the rail technical specifications for interoperability of the Telematic Application for Freight (TAF TSI).
